

# Management of “Climate Austria” voluntary emission reduction platform - Developed by KPC in cooperation with the Federal Ministry of Agriculture, Environment and Water Management

**Client:** Federal Ministry of Agriculture,  
Environment and Water Management

**Duration:** 2008 – ongoing

**Location:** Austria and International

Climate Austria, a project run by Kommunalkredit Public Consulting, is devoted to the voluntary offsetting of CO2 emissions. This is achieved by investing voluntary contributions in climate protection projects, primarily in Austria and, upon request, also abroad. Climate Austria offers private clients the opportunity to calculate and offset their CO2 emissions. Climate Austria offers businesses specially tailored solutions that show how they can offset unavoidable CO2 emissions resulting from their business activities. Climate Austria sees itself as a link between people or businesses and climate protection projects.

Since the establishment of Climate Austria about 1.5 Million Euros have been collected and thus supported voluntary climate change projects.

The following tasks were provided:

- Budget Management
- Project Selection
- Project Monitoring
- Advice for increasing energy efficiency
- Disbursement of funding for co2 compensation projects
